maxlearning

ILLUSTRATED HELP

Welcome to your learning workshop.

Max Learning helps a learner choose a small quest, make something, and save what happened. This guide shows the main screens with demo information only.

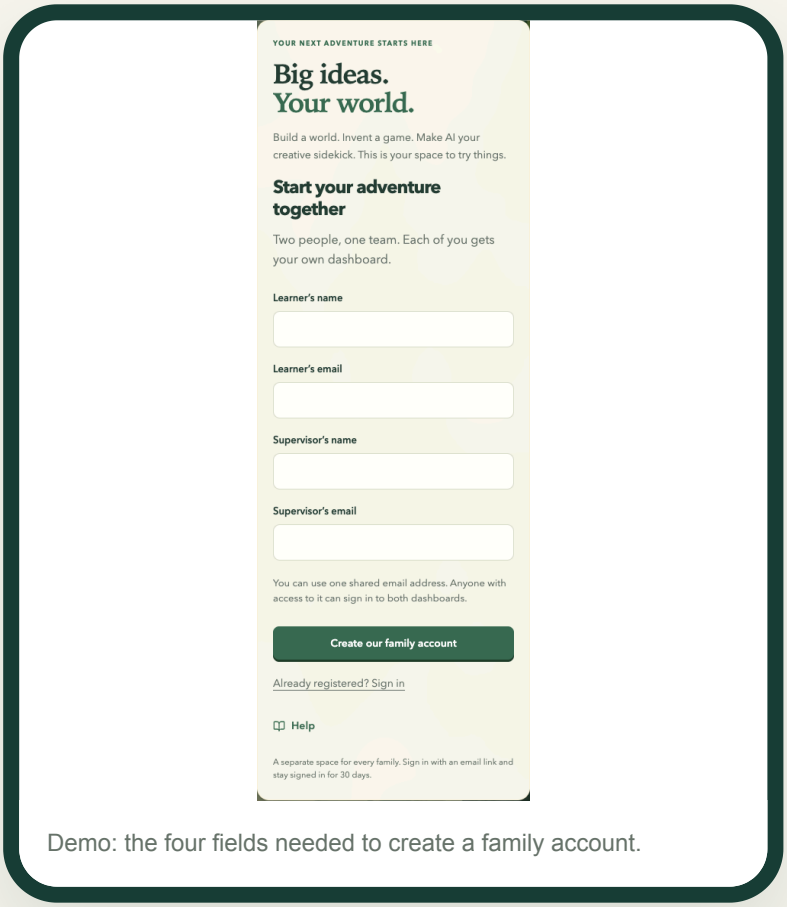

1. START TOGETHER

Make one family account.

On the home page, enter four details: the learner's name and email, then the supervisor's name and email. Each person gets their own dashboard after confirming their email.

Already have an account? Choose **Already registered? Sign in**, or open Sign in. Enter the family email to receive a sign-in link. The link works for 15 minutes.

> **Shared device?** Sign out when you finish.

Demo: the four fields needed to create a family account.

2. LEARNER: FIRST QUEST

Use the three learning steps.

1

Pick a quest

2

Make something

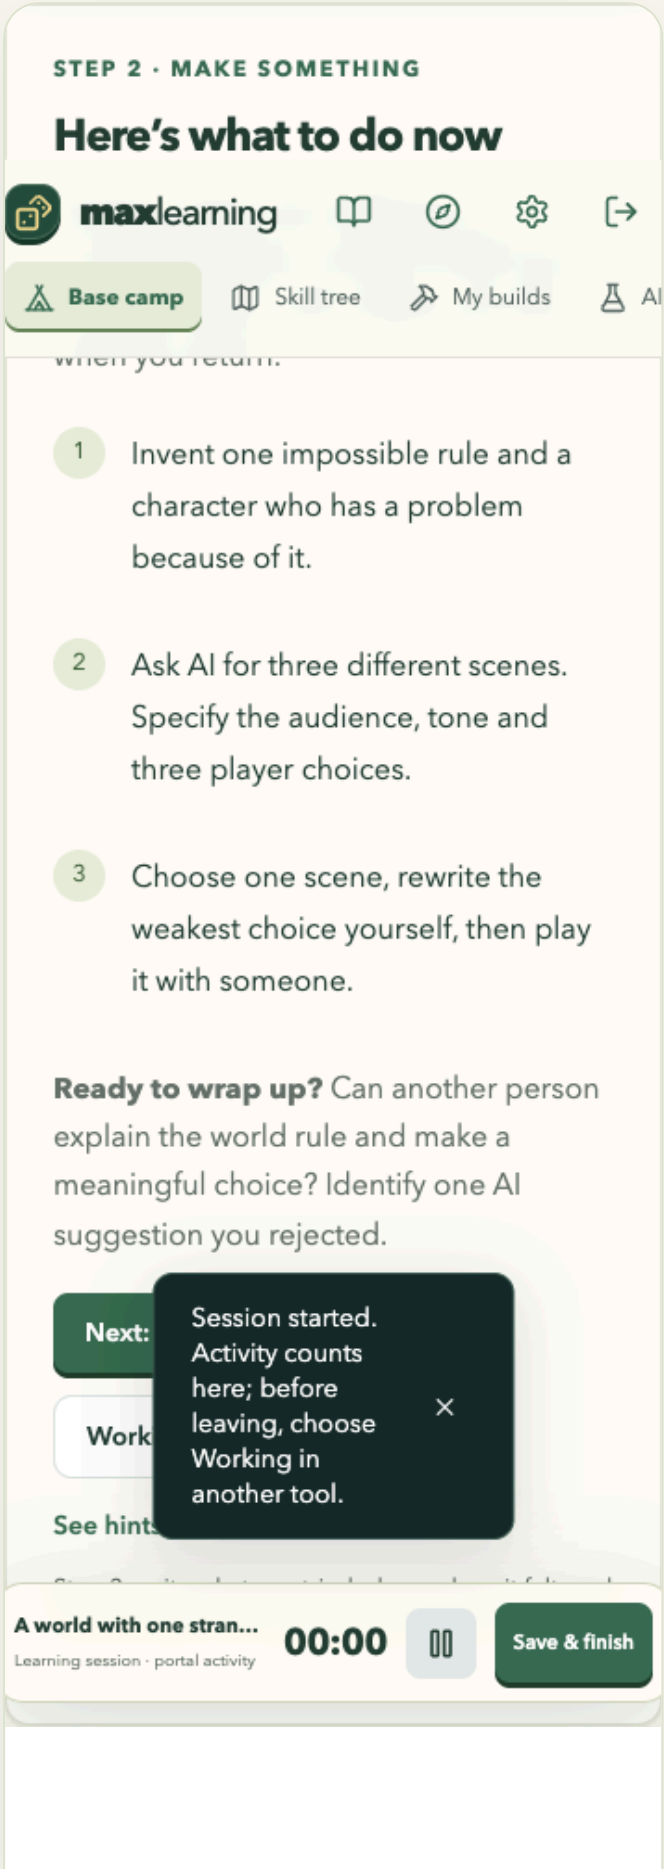

3

Save what happened

Open Base camp and choose one small adventure. Read the goal, then press Start only when you are ready.

Follow the steps. Try a first version, a sketch, a scene, or a useful answer. You can use the hints and toolkit when you need them.

Choose Save & finish. Write what you tried, add an optional link to your result, and choose how it felt. A stuck or unfinished experiment still counts.

Demo: a quest in progress. The timer only starts after the learner starts a quest.

TIME AWAY FROM THIS PAGE

Say when you are working in another tool.

Before leaving an active study quest, choose **Working in another tool**. This opens one 15-minute block. When you return, choose **I'm back — report my work**, enter the minutes you really worked, and write what you tried.

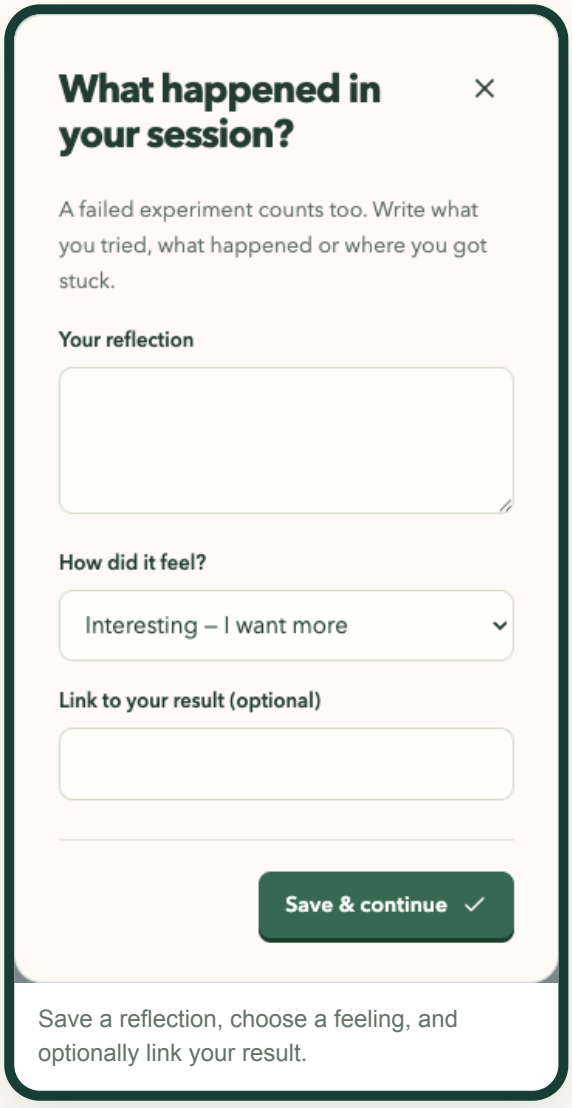

The time is self-reported and remains in the learning record. It does not earn game-time credit. One minute of active learning in the portal earns one minute of game time; games and pauses do not.

SAVE YOUR PROOF

A short reflection is enough.

Choose **Save & finish**. Write what you tried, what happened, or where you got stuck. Then choose a feeling. Add a link to your result if you have one.

Honest notes help you and your parent choose a smaller or more interesting next step.

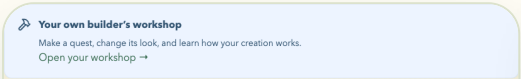

Save a reflection, choose a feeling, and optionally link your result.

3. MAKE THE WORKSHOP YOURS

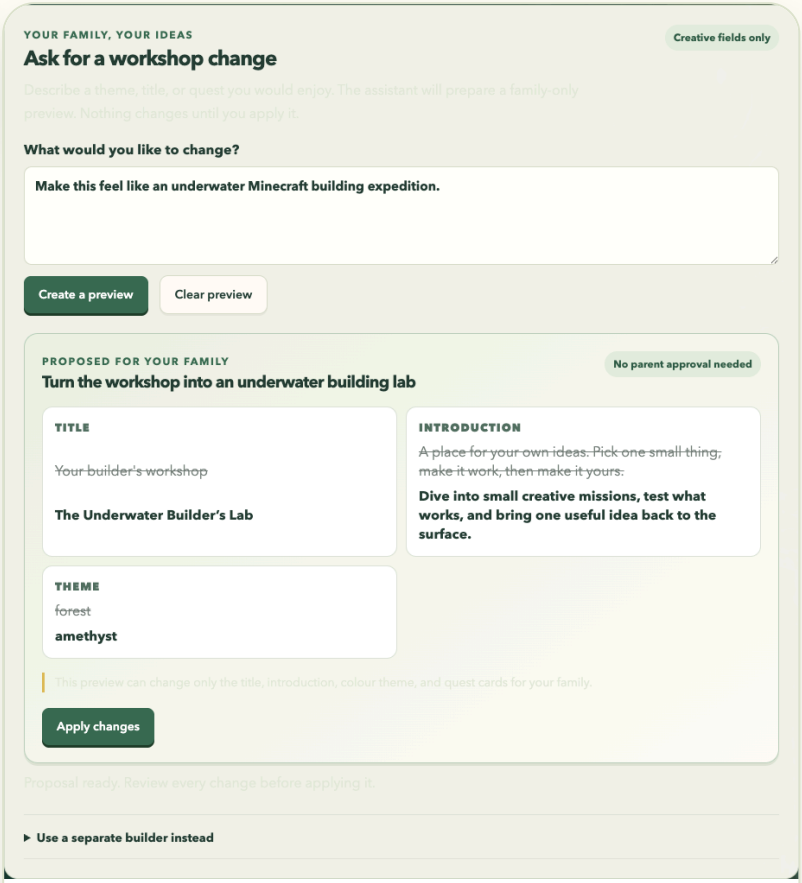

Change the creative space, safely.

Open **AI Lab** and choose **Open your workshop**. The workshop can change its title, introduction, colour theme, and quest cards. It cannot change accounts, time, permissions, or services.

Describe the kind of quests you want. Review the preview, then choose **Apply changes**. A parent can also manage the family workshop template and its approved creative fields.

From AI Lab, open your family workshop.

Review every proposed field before choosing Apply changes.

> The AI mentor can coach you inside the signed-in portal. Workshop changes still use the separate review-and-apply controls shown here. For unrelated requests, the mentor will guide you back to your learning task.

4. PARENT OVERVIEW

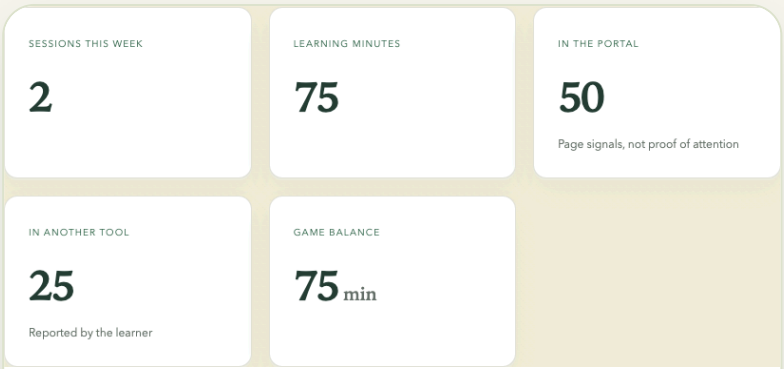

Keep the conversation going.

Sign in as a parent to see the past seven days: sessions, learning minutes, time reported in another tool, game balance, and saved reflections. Only active portal learning earns game-time credit at one minute for one minute. These are records for a conversation, not proof of attention or an assessment.

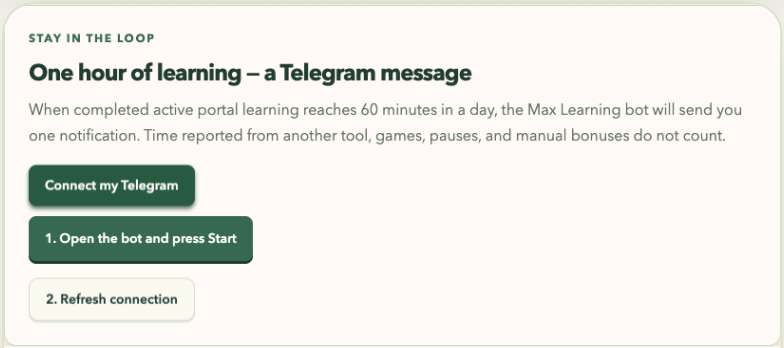

You can add a real-world task, set a daily game-time limit, and use the conversation starters to ask about the learner's next step.

Connect Telegram

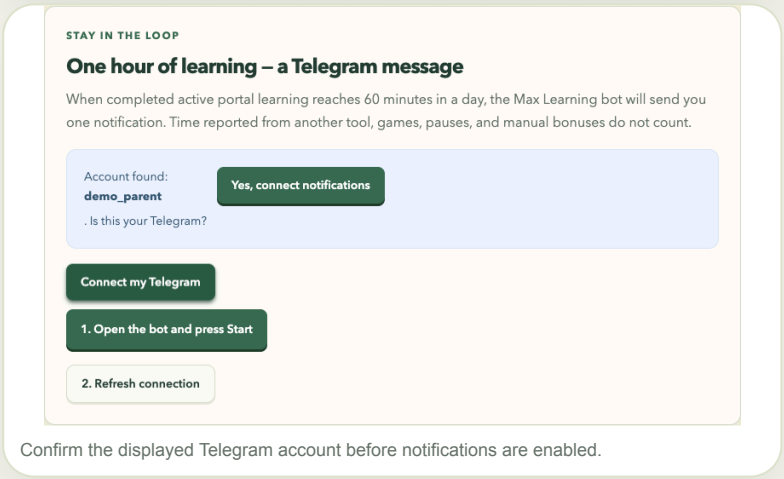

In Parent overview, choose **Connect my Telegram**. Open the Max Learning bot, press Start, then return and choose **Refresh connection**. When the account appears, choose **Yes, connect notifications**. Once connected, turn on the one-hour notification if you want it. It sends one message after completed active portal learning reaches 60 minutes in a day. Time reported from another tool does not count toward the notification.

Demo: weekly records support a family conversation.

Open the bot, press Start, then refresh the connection.

Confirm the displayed Telegram account before notifications are enabled.

One small step is a good start.

Pick a quest, make something, and save an honest note about it.
